DETAILED ACTION

- 1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submissions filed on 25 April 2005 and 28 March 2005 have been entered.
- 2. The rejection over Toshima in view of Jaisle et al. in section 5 of the detailed portion of the office action mailed 29 December 2004 has been withdrawn in view of applicant's arguments in the papers filed 25 April 2005 and 28 March 2005.
- 3. Claims 1, 3, 5 and 6 are allowed. The limitation of the cast film extending in the direction of stress perpendicular to the cut line in the oriented film and forming a small hole at locations adjacent both ends of the cutting line that expand and shrink in combination with the other limitations of independent claim 1 define over the cited art. The examiner notes that JP-U

Art Unit: 1772

108861 teaches a slit in an outer oriented film, an intermediate layer and a heat seal inner layer with rupturing of the inner layers upon heating, however there is no teaching of the intermediate or other layer being formed in such a manner that small holes that expand and contract form in the cast inner film at locations adjacent to both ends of the cut line in the oriented layer when the film laminate is subject to pressure. Claims 5 and 6 have been rejoined with the group of independent claim 1 as they contain all of the limitations of allowed independent claim 1.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claim 4 is rejected under 35 U.S.C. 102(b) as being anticipated by Oyama (U.S. 6,068,898).

See the abstract and Figure 7, which shows an outer insulation layer (element 2) which expands and ruptures when subject to pressure from an inner cast layer with cut lines

Application/Control Number: 10/009,205

Art Unit: 1772

(element 3). The size of the opening adjusts to maintain a desired pressure within the container (col. 7, lines 40-50). The inner film is a polyolefin (col. 7, lines 50-65), that has a lower melting temperature than the outer nylon layer, which will allow heat sealing of the inner layer to other substrates.

- 6. Applicant's argument with respect to claim 4 has been considered but is moot in view of the new ground(s) of rejection.
- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The references show various vent systems in film applications.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Watkins III whose telephone number is 571-272-1503. The examiner works an increased flex time schedule, but can normally be reached Monday through Friday, 11:30 A.M. through 8:00 P.M. Eastern Time. The examiner returns all calls within one business day unless an extended absence is noted on his voice mail greeting.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 571-272-1498. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/009,205
